cc the phage surface as fusions with gene II. The resulting library of clones was diverse; 23 hapten binding clones were sequenced revealing 8 cc (H genes (A.H; ARR21264-71) in a variety of pairings with 7 Vk genes (a-g), ARR21286-92). Most clones were VH-B combinations so a further chierarchical library was prepd. by "crossing" VH-B with the Vk repertoire. The resulting library was screened for hapten binding and 24 clones sequenced. 14 new partners (AAR21293-308) for VH-B were consignal library) and h, p, q, and r (from the hierarchical library) were voxil type genes. Of the 24 hierarchical clones, only one was of type crossing. The Kd of VH-B Vk-d for phox-GABA was 10 nM, one of the highest caffinit les can be selected with antigen, probably due to the avidity of the multiple antibody heads on the phage. The different combinations cc could also be isolated on a basis of antigen affinity. See also AAR21260-307, 309-311; AAR22450, 565-581

       Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      B B

    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                     Score
